

# BESPOKE INTERFACE

## ...single user system.

This product is simple to look at but don't let this fool you, it is full of the latest GSM and Land Line features.

With a super low profile and fascia size the Bespoke Interface won't stick out like a sore thumb. This discreet size is achieved by removing the main control unit from the panel and mounting it in a separate enclosure.

The single button is able to call-forward, the same as our other systems, so if the initial call is not answered the Bespoke Interface will search for up to 8 further numbers.

The timed profile facility may also automatically set the call button to dial a different telephone number at a certain pre-determined time. This could be to suit a lunch hour, an out of hours number once a business is closed or even be set to not dial at all if privacy is required late at night.

The Tel-Pad may be used for coded exit with this system. If a panel mounted keypad is required the Bespoke with Keypad or T-Bespoke products are recommended.

An authorised user is able to call the intercom and automatically operate the entrance without being charged for the call.
