

T-BESPOKE

...single entry system with backlit keypad

The T-Bespoke is available with a backlit silicone keypad and a backlit call button. The silicone keypad is re-programmable to 7 different colours! This really makes the panel look individual, especially when the panel is powder coated in a specific colour...or even chromed!

Once a Telguard Approved Installer has installed and commissioned the system you are ready to go. The Crush Fold version is available with a backlit blue stainless steel keypad along with a low profile back box and LED down light.

A visitor presses the call button which is automatically directed to the destination. The Electronic Voice Assist™ will provide indication of the progress of the call.

The call is answered with a land line telephone, cordless or mobile. When the recipient of the call wishes to allow access, they press a key on the chosen telephone. A tone is heard to indicate successful operation and the visitor may enter.

The panel is able to house a camera or proximity access control reader. An authorised user is able to call the intercom and automatically operate the entrance without being charged for the call.
